Obstetrics & Gynecology

J. Harley Barrow, Jr., M.D. – Amanda G. Thornton, A.P.N.

CLOMID THERAPY

- Assurance of a negative pregnancy test
- Take Provera - one tablet for five days until onset of menses
- Start day count with first day of menses as day one
- Begin Clomid five days after onset of menses
- Take Clomid as prescribed, days 3-7 of cycle
- Have intercourse every other day, days 10-20 of cycle, if possible

If you have not started your period after approximately 35 days from last period, then check a home pregnancy test. If negative, then restart Provera, as above, and contact office for change in Clomid.
