

BIOTE[®] MEDICAL NUTRACEUTICALS

BioTE's nutraceutical product line has been carefully created to support bioidentical hormone replacement therapy (BHRT). Featuring ingredients that help promote better health, these clinical-grade nutraceuticals are essential to ensure a complete and personalized approach to healthier aging.

DIM SGS+

DIM SGS+ contains extracts from broccoli and pomegranate that provide support for the healthy utilization of estrogen in both men and women.* Too much estrogen can cause significant damage to our bodies. Studies have shown that people with high levels of estrogen have a higher risk of increased weight gain, bloating, water retention, or worse.^[1]

DIM is short for diindolymethane. This compound is derived from cruciferous vegetables and helps promote hormone balance. When taken daily, BioTE DIM SGS+ can support weight management and breast, uterine, cervical, and prostate health.*

DIM SGS+ is an ideal combination of diindolymethane (DIM), sulforaphane (SGS), and pomegranate extract. These ingredients stimulate efficient metabolism for estrogen, meaning they help regulate the ratio of healthy to less healthy estrogen. A healthy estrogen metabolism may protect estrogen-sensitive issue and support detoxification and neutralization of harmful estrogen metabolites.
